Recommendation 2	12-Month Execution Roadmap
Recommendation 3	First 90 Days
Recommendation 4	Summary
Recommendation 5	Links

My personal recommendations based on the class readings, external research, learned knowledge, and educated assumptions.

Executive Summary

Tuff Collection is not dealing with a traffic problem. Instead, it has a funnel problem and a channel-mix problem. The brand already has 10,000 monthly visitors, a 12% add-to-cart rate, 50% email open rates, and 20 years of Costco brand recognition. The growth isn't locked behind more ad spend – it's gated behind converting and retaining the audience already showing up. The proposed strategy is built on three compounding systems: Convert, Retain, and Acquire.

Three Systems, One Flywheel	The Opportunity in Numbers
1. CONVERT – Fix the funnel before scaling traffic. CVR of 1% against a 3%+ industry benchmark means half the potential revenue is being left on the table from existing visitors. 2. RETAIN – Turn a 20% repeat purchase rate into 35%+. The cheapest customer you will ever acquire is one you already have. 3. ACQUIRE – Diversify traffic away from 57% paid dependency using TikTok, Pinterest, SEO, and the Costco heritage bridge – a unique asset no other DTC brand has.	• Current: 100 orders/month → ~\$11,400 GP • Fix CVR to 2.5% only: +\$17,000 GP/month • Add email flows properly: +\$6,500 GP/month • Add retention (35% RPR): +\$2,800 GP/month • Combined (Month 12): ~\$70,000+ GP/month • That is a 6× GP increase – without 6× the ad spend.

CREATIVE INSIGHT

Tuff Athletics has an extremely unique position, they have been in Costco for 20 years. That means there are hundreds of thousands of Canadian women who already know, trust, and have bought from this brand. But, they have NO idea thetuffcollection.com exists. This is free acquisition waiting to be activated. It is incredibly rare in DTC: pre-existing brand equity. Every recommendation in this strategy is built around making use of assets Tuff already owns before buying more attention.

The Tuff Growth Flywheel • Three Compounding Systems

Each system feeds the next:

More conversions → More repeat buyers → More organic word-of-mouth & lower CAC → More growth

The Situation

Site Audit + Data Diagnosis

After reviewing [thetuffcollection.com](#), [the Tuff activewear collection](#), [the Maven Studio page](#), and individual PDPs like [the Caitlin Wool Coat](#), here is what stands out:

What Tuff is doing well	The friction points killing conversion
● Brand voice: 'Light. Intentional. Effortless.' – fitting for the 20–40s busy woman positioning ● Visual identity: clean, editorial, aspirational without being inaccessible ● Navigation: well-structured by category and brand (Tuff vs. Maven Studio) ● Free shipping threshold at \$80 naturally incentivises multi-item orders ● Maven Studio spring 2026 arrivals (Colette Pant, Ashlynn Pant) are visually compelling ● Site uses Shopify, every recommendation below has a native app or setting	● Zero product reviews visible on any PDP – the #1 trust signal for new DTC customers ● No free-shipping progress bar ("-\$22 away from free shipping") – the simplest AOV lever ● No "Complete the Set" cross-sell – single-item orders kill AOV ● Maven Studio collection page has no editorial story – just a product grid for a 4-week-old brand ● No Browse Abandonment email flow, visitors who look but don't ATC are un-retargeted ● Tuff Athletics link goes to a different URL (tuffathletics.com) – Costco customers who find their way here get confused

TUFF Collection – Full Customer Journey Map

(Current Gaps + Fixes)

Categories	Awareness	Discovery	Browse	Intent	Convert	Retain	Advocate
Today	Paid Social 32%	Google Search 25%	No story, no reviews	12% ATC High intent	1% CVR BIG LEAK	20% repeat, below avg	Almost none
Fix	TikTok + Pinterest + SEO	Costco bridge SEO + branded	Reviews + Shop the Look	Free shop bar, Browse abandonm ent	CRO + reviews Apple Pay	Email flows + SMS + Loyalty	UGC + Capsule Club
Channel	Organic TikTok	Google SEO Paid Search	Email flow: Browse	Email Care Abandon	Shopify CRO A/B Tests	Klayviyo Email + SMS	UGC + Reviews
KPI	Reach Impression s	Organic traffic	Time on page	ATC rate >15%	CVR >2.5%	RPR >25%	NPS + UGC volume

The Conversion Diagnostic

Applying the **Marketing Experiments heuristic** from class ($C = 4m + 3v + 2(i-f) - 2a$): Motivation is already working, 12% ATC proves shoppers have intent. The suppressed factors are anxiety (no reviews, no social proof, uncertain fit) and friction (no one-tap checkout, no size confidence, no urgency). The **11% bounce rate** tells an important story: visitors are genuinely engaged with the brand. They are not arriving and leaving immediately. They are browsing, they are adding to cart, and then they are leaving. This is a **closing problem, not a traffic problem**.

Metric	Current	Gap / Opportunity
Conversion Rate	1.0%	Fashion apparel avg: 3.6% (Sobot, 2025). Gap = ~\$21,000 GP/month unrealized
Email Revenue Share	~2%	DTC email benchmark: 20–30% (Klaviyo). Email flows drive 30x more RPR than campaigns
Organic Social	3%	A visual lifestyle brand for women – TikTok + Pinterest are purpose-built for this demo
Repeat Purchase (12mo)	20%	DTC leaders: 35–45%. Klaviyo post-purchase flows recover this gap at near-zero cost
Browse Abandonment	Not set up	Missing flow. Avg RPR: \$1.95 per recipient (Klaviyo 2024). 10k visitors × 20% browse = 200/mo opportunity
Cart Abandon. Flow	Active (basic)	Current 1-email flow. 3-email sequences generate 6.5× more revenue vs single email (Klaviyo/Mailmend)
Pinterest presence	Zero	83% of Pinterest weekly users made a purchase from Pinterest. Capsule wardrobe: 5M+ monthly searches
AOV	~\$175 CAD	With cross-sell + free shipping bar: target \$200–215. No dev required, Shopify-native tools

Recommendation 1

Fix the Funnel (CRO + A/B Testing)

Every paid dollar Tuff spends acquires traffic at 1% CVR. At 2.5% CVR, which is below the fashion industry average, the same traffic budget produces 2.5× the revenue. **CRO is the multiplier. Everything else compounds off it.**

Priority Actions (Month 1–2)

1. **Install Microsoft Clarity (free).** Week 1. Watch 20 session recordings on the leggings PDP (thetuffcollection.com/collections/leggings-shorts) and the checkout. This is not optional – it's the data that informs every other CRO decision. The Hotjar heatmap module from class applies directly.
2. **Add product reviews using Okendo or Judge.me.** Both are Shopify-native, free to start. Email your 30 most recent buyers with a 10% incentive for leaving a review. [Research shows](#) 74% of people trust reviews from others – and zero reviews signals "this brand is new and unproven."
3. **Add a free-shipping progress bar in the cart.** Monster Cart Upsell (Shopify App Store) adds this in 20 minutes. "You're \$23 away from free shipping" naturally increases AOV from \$175 toward \$200+, clearing the \$80 threshold automatically and making every order feel like a win for the customer.
4. **Enable Apple Pay and Shop Pay.** Go to Shopify Settings → Payments → Accelerated Checkouts. One-tap checkout. For mobile users (likely 60%+ of Tuff's traffic given the target demo), each extra form field loses ~20% of remaining shoppers.
5. **Add "Complete the Set" cross-sell.** On all leggings and tights PDPs, show a "Frequently Bought Together" module with the matching sports bra and a Maven Studio piece. If the customer buys all three, trigger the free shipping threshold automatically. AOV goes from \$74 to \$220 in one session
6. **A/B test the Maven Studio collection page.** Current: pure product grid. Proposed: grid PLUS a 3-sentence brand manifesto at the top and a "Shop the Transition: Gym to Office" lookbook row. Use Zoho PageSense (free tier) or Optimizely as per class. Hypothesis: adding story context to a 4-week-old brand will increase PDP clicks by 15–25%.

Aēsop.

Skin • Shave

Double-Edge Razor

Featuring a hand-polished and triple-plated collar, this high density handle and chrome-plated blade head are perfectly balanced to facilitate an immaculate shave. Sold with ten stainless steel Merkur Solingen razor blades.

Key ingredients

Handmade by skilled English craftsmen

Add to your cart — \$105.00

Using Aēsop's finest quality Shaving Brush, lather Moroccan Neroli Shaving Serum in Sori Yanagi's Stainless Steel Bowl. Finish with Moroccan Neroli Post-Shave Lotion to soothe and balance skin; this formulation is available paired with its Shaving Serum counterpart in Moroccan Neroli Shaving Duet.

Shaving Brush

Moroccan Neroli Shaving Serum

Cross-Sell Example ([Source](#))

The CRO Math (class breakeven framework)

- Current: 10,000 visits × 1% CVR × \$175 AOV × 65% GM = \$11,375 GP/month
- CVR 1% → 2% (zero new traffic): \$22,750 GP/month (+\$11,375 from near-zero spend)
- CVR 2% + cross-sell lifts AOV to \$200: \$26,000 GP/month
- CVR 2.5% + \$200 AOV + 15,000 visitors (Month 6): \$48,750 GP/month

Source: Case brief economics + Sobot fashion CVR benchmarks 2025 (sobot.io)

Recommendation 2

Email Strategy (Lifecycle + Flows)

An 8% email capture rate, ~50% open rates, and **only 2% of revenue from email** is the most expensive missed opportunity in this account. [Klaviyo's 2024 benchmark data](#) shows automated flows generate 30× more revenue per recipient than one-off campaigns.

The Four Flows to Build (in priority order)

- **Flow 1 – Welcome Series (restructure immediately).** Current: discount code in Email 1. Fix: move the offer to Email 2. Email 1 earns trust with brand story ("From Costco shelves to your capsule wardrobe – elevated"). Email 2 (24 hrs, no purchase) delivers the offer. This distinction matters: brands that lead with discount train customers to wait, not buy. The [Klaviyo benchmark](#) for welcome series RPR is \$3.34 per recipient – nearly 30× better than a one-off campaign.
- **Flow 2 – Browse Abandonment (build now, currently missing).** Trigger: viewed a product page, did not add to cart. Email 1 at 4 hrs: "Still thinking about the [Tuff High-Rise Leggings?](#)" with product image and one review quote. Email 2 at 24 hrs: "Others are looking at this" + 3-star ratings. [Klaviyo data](#): browse abandonment converts 3–5% of recipients at \$1.95 RPR. At 10,000 visitors/month with ~20% browsing without ATC, this flow generates ~\$390 in additional monthly revenue at baseline – all from traffic already arriving.
- **Flow 3 – Cart Abandonment (optimize existing).** Three-email sequences generate 6.5× more revenue than single emails – [\\$24.9M vs \\$3.8M in Klaviyo analysis](#). Current setup is likely a 1-email flow. Restructure: Email 1 (1 hr, no discount, reinforce quality/value), Email 2 (24 hrs, urgency – "low stock in your size"), Email 3 (48 hrs, 10% offer with 48-hr expiry). For Tuff's AOV of \$175, brands in the \$100–200 AOV range average [\\$7.01 RPR per recipient](#) for cart abandonment flows.
- **Flow 4 – Post-Purchase Nurture (build Month 2).** Day 2: care tips + "Complete your set" cross-sell (bought leggings → show matching bra + Maven Studio piece). Day 7: Maven Studio introduction for activewear buyers – "Meet the other side of Tuff." Day 14: review request with 10% off next order. Day 45: winback if no second purchase – new arrivals email with a soft offer.

Email Revenue Projection

- Current: 2% of \$17,500/month = \$350/month from email
- Target (Month 6): 20% of \$35,000 = \$7,000/month from email flows + campaigns
- Automated flows alone: 10,000 visitors × 8% capture × flows RPR = estimated +\$2,800–4,200/month
- [Source](#)

Recommendation 3

The Costco Heritage Bridge

This is the single most differentiated opportunity in this strategy. **No other DTC brand in the world has Tuff's specific asset: 20 years of brand equity with millions of Costco shoppers who already know, trust, and have worn the product.** The pivot from wholesale to DTC creates an education gap, but that gap is an acquisition channel waiting to be opened.

Costco Tuff Athletics ([Source](#))

Four Tactics to Activate the Costco Customer

1. **Branded keyword defense (Google Search, Month 1).** "Tuff Athletics online," "buy Tuff activewear not at Costco," "Tuff leggings website" – these are near-zero-competition, high-intent searches with CPCs likely under \$0.50. These searchers already want to buy. They just need to find the site. This maps to the **branded vs. non-branded keyword strategy** from the paid search module.
2. **SEO landing page: "From Costco to Capsule."** Build a dedicated page at thetuffcollection.com/pages/costco-to-capsule with copy like: "If you've loved Tuff Athletics at Costco for years, meet the premium DTC line we built for you." This page targets "Tuff Athletics online" organically, builds internal linking, and captures a customer who is one step from buying. Cost: 2 hours of copywriting.
3. **Maven Studio as the "upgrade" story.** The messaging angle is powerful: the leggings Costco customers love are the entry point. Maven Studio is where the brand evolves. Content hook: "You've lived in Tuff leggings from Costco. Now there's a collection that takes you from 6am to 6pm." This is not just a product pitch – it's a brand story with a protagonist the customer already knows.
4. **Social bridging on TikTok/Instagram.** A 3-part TikTok series: "What we made for Costco vs. what we built for you." This directly speaks to the Costco demo, creates social currency (the insider information feel), and drives both brand search volume and affiliate conversions via Awin.

Costco Bridge

Why the Costco Bridge is worth prioritizing above all other acquisition tactics

- Cold traffic acquisition via Meta: ~\$90–120 CAD CPA at 1% CVR
- Costco bridge traffic (branded search, direct, word-of-mouth): near-zero CPA
- These customers already trust the brand – conversion rate from this cohort will be 3–5× higher than cold traffic
- The content practically writes itself – the origin story is genuinely compelling

Recommendation 4

TikTok + Pinterest (Build Owned Organic)

Organic social generates 3% of traffic for a brand selling **lifestyle activewear to women 20–40** in 2026. TikTok is the discovery engine for this demographic. Pinterest is the purchase-intent engine. Together, they replace a portion of paid traffic with compounding, owned-channel traffic at near-zero ongoing cost.

TikTok – The Awareness Engine

The **6 STEPPS framework** from class maps precisely to Tuff's content opportunity: Social Currency (wearing premium activewear at attainable prices is a smart-shopper flex), Triggers (morning routines, school-run GRWMs are habitual content hooks), Public (outfit transitions are inherently imitable). The Costco-to-premium origin story is a Story in the classic viral sense – it's unexpected, relatable, and shareable.

- **Content strategy – 3–4 posts/week:** Format 1: "Get ready with me" for school run or gym to work, featuring a specific Tuff + Maven transition. Format 2: "Honest review: Tuff vs [competitor] – I wore both for 30 days." Format 3: Outfit transition reels set to trending audio. Format 4: Behind-the-scenes of a brand that started at Costco building a DTC collection.
- **Micro-influencer sourcing via Awin:** 8–10 Canadian lifestyle/fitness creators (10K–100K followers). Budget \$100–500 each + affiliate codes. [inBeat Agency benchmarks](#) show micro-influencers average 10–13% engagement – vs 1–2% for celebrities. Every sale is tracked via Awin codes.
- **TikTok Spark Ads (Month 4+):** Only boost organic content that already has proven engagement. Do not pay to amplify content that has not first validated organically. This cuts CPV by 30–50% vs. cold creative.

Pinterest – The Stealth Purchase-Intent Channel

Pinterest is the most underutilized platform in the DTC activewear space – and the most aligned with Tuff's positioning. 76% of Pinterest users are women. [Capsule wardrobe](#) content generates millions of monthly searches. A single pin can drive traffic for 3+ months. And [83% of weekly Pinterest users](#) have made a purchase based on something they found there.

Capsule Wardrobe Example ([Source](#))

- **5 pin series to launch immediately:** (1) "5-piece capsule wardrobe for busy moms – Tuff Collection"; (2) "Gym to office: 1 outfit, 3 transitions with Tuff + Maven"; (3) "How to style the Colette Pant 3 ways" (linking to [maven-studio](#)); (4) "The honest Lululemon alternative guide for Canada"; (5) "Tuff activewear: what 20 years of Costco and a DTC pivot looks like."
- **SEO play:** "affordable activewear Canada," "capsule wardrobe workout," and "women's activewear sets Canada" are high-volume Pinterest search terms with almost zero optimized brand content. Tuff can rank on the first page of Pinterest for these terms within 60 days of consistent posting.
- **Tool:** Canva (Tuff's designer can create pin templates in 1 hour) + Tailwind for scheduling (\$19/month). Pinterest is one of the highest-ROI additions to a lean team's content calendar because pins write-once, perform-for-months.

Recommendation 5

Maven Studio: The Drop Model

Maven Studio launched in recently. Here is a **creative alternative** that costs the same but generates significantly more excitement, urgency, and email list growth: the Seasonal Drop model.

Instead of continuous product availability with quiet restocks, Maven Studio releases 4–6 key pieces per season in a **named, limited-quantity drop**. The Colette Pant and Ashlynn Pant already exist as natural candidates for the "Spring Drop." Here is what changes with the drop model:

- **Pre-drop buzz (6 weeks before):** Teaser content on TikTok and Instagram. Waitlist email capture: "Join the waitlist for the Maven Spring Drop." Every waitlist sign-up is a zero-cost email acquisition. This is **Triggers + Scarcity** from the viral marketing module – the most powerful behavioural drivers for the 28–42 demo.
- **Drop day:** Email blast to full list. SMS to opted-in subscribers. Klaviyo flow triggered by "Drop live" event. Early access (48 hrs before public) given to Capsule Club members (see below). TikTok video: "The Maven Spring Drop is live. These 6 pieces. Limited run."
- **Post-drop:** "Almost gone" retargeting ads for any visitor who viewed a drop product but did not buy. Waitlist for sold-out items captures the next cycle's email list passively.
- **Why this works:** Urgency is the most powerful conversion driver for fashion DTC. Limited drops create legitimate FOMO, not manufactured discount pressure. They position Maven Studio as a brand people follow, not just browse.

Maven Studio

Designed as an everyday capsule for life in motion. Thoughtful silhouettes, soft structure, and adaptable essentials created to support her pace, so getting dressed feels intuitive and familiar.

Maven Studio ([Source](#))

e Club Loyalty Program

The repeat purchase rate of 20% is below the DTC benchmark of 35–45%. The gap represents thousands of dollars in monthly gross profit from customers who have already bought and could be brought back at near-zero acquisition cost. A loyalty program converts post-purchase satisfaction into structured repeat behaviour.

- **Tuff Starter (1st purchase):** Early sale access, free shipping threshold drops to \$60, birthday discount (15%). Goal: remove the barrier to a second purchase.
- **Tuff Collective (3+ purchases):** 48-hour early access to Maven drops, monthly curated outfit email, free returns. Goal: the aspirational tier that motivates a 3rd purchase.
- **Tuff Founder (6+ purchases):** Quarterly capsule package, named in brand content, access to collection previews. Goal: superfan engine – these customers post organic UGC and refer new buyers at no cost to Tuff.
- **Tool: Smile.io (Shopify-native, free to \$49/month).** Points earned for purchases, reviews, social shares, and referrals. Setup time: 2–3 days, no developer required. This is the lifecycle pyramid from class made operational.

Loyalty Program Image ([Source](#))

Recommendation 7

Paid Search Efficiency

Paid search is already active and driving 25% of traffic. The priority is efficiency, extracting more conversions from the same budget, not more spend. This is the max CPC and Quality Score framework from class applied to Tuff's actual numbers.

- **Max CPC calculation (leggings category):** At 2% CVR (post-CRO), gross profit per order is ~\$46 (65% GM × \$70 avg price). $\text{Max CPC} = \text{CVR} \times \text{GP} = 0.02 \times \$46 = \$0.92$. Any keyword with a current CPC above \$0.92 is unprofitable. Run the search term report and audit against this ceiling immediately.
- **Defend branded keywords:** Exact match campaigns for "Tuff Collection," "Maven Studio Canada," "Tuff activewear" at low bids. Branded search has the highest Quality Score, lowest CPC, and highest conversion rate of any campaign type. Losing a branded SERP position to a competitor would cost far more to recover than to prevent.
- **Google Shopping (PLAs) for activewear:** For visual products like leggings and sports bras, Shopping ads outperform text ads because shoppers see the product image, colour, and price before clicking. Tuff's price advantage over Lululemon is most visible in a Shopping result. Launch with \$15/day test budget.
- **Retargeting – time-decay model (class module):** Day 1–3: product image retargeting, no discount. Day 4–7: "Limited stock in your size" urgency. Day 8–14: 15% offer with countdown timer. After Day 14: suppress. Build a separate retargeting audience for Maven Studio drop page visitors – these are high-intent, under-retargeted shoppers.

Paid Search Image ([Source](#))

Financial Model

What Success Looks Like

TODAY – Baseline State	MONTH 12 – Target State
• Monthly visitors: 10,000 • CVR: 1% = 100 orders • AOV: \$175 CAD (avg 2.5 items × \$70) • Monthly revenue: \$17,500 • Gross margin (65%): \$11,375 GP/month • Email share: 2% = \$350/month • Repeat purchase: 20% in 12 months • Paid traffic share: 57% – fragile • Browse abandon. flow: none	• Monthly visitors: 18,000–22,000 (SEO + TikTok + Pinterest) • CVR: 2.5% = 450–550 orders • AOV: \$200–215 (cross-sell + free shipping bar) • Monthly revenue: \$90,000–\$118,250 • Gross margin (65%): \$58,500–\$76,900 GP/month • Email share: 20% = \$18,000–\$23,000/month • Repeat purchase: 35%+ (Capsule Club + flows) • Paid traffic share: 35–40% – diversified • All 4 Klaviyo flows active and optimized

Where each GP dollar comes from in Month 12

1. CRO (CVR 1% → 2.5%, AOV \$175 → \$210): +\$41,000 GP/month vs. baseline
2. Email flows (2% → 20% of revenue): +\$10,500 GP/month
3. Repeat purchase rate (20% → 35%): +\$3,800 GP/month added LTV
4. Organic traffic growth (3% → 15% of mix): -\$4,200/month in paid spend saved

Combined 12-month incremental GP vs. baseline: approximately \$640,000 CAD

Note: These projections assume sustained current paid media spend (no increase required)

12-Month Execution Roadmap

Sequenced by impact-to-effort ratio. Months 1-3 are executable by Jason's team of 3 using Shopify-native tools and Klaviyo only.

Month	Recommendation	Channel	KPI Target	Class Concept
M1	Install Microsoft Clarity – watch 20 session recordings on leggings PDP + checkout	Analytics (free)	Drop-off identified	A/B Testing – data before decisions
M1	Add product reviews: email 30 recent buyers with 10% review incentive (Okendo)	Site (Shopify)	Reviews live on 5 PDPs	CRO – social proof reduces anxiety (C=4m+3v-2a)
M1	Restructure welcome flow: brand story Email 1, discount Email 2 (Klaviyo)	Email	Email CVR up	Email Lifecycle – nurture vs. drip
M1	Add free-shipping progress bar to cart (Monster Cart Upsell app)	Site (Shopify)	AOV +10-15%	A/B Testing – reduce friction
M1	Enable Apple Pay + Shop Pay in Shopify checkout settings	Site (Shopify)	Mobile CVR +	A/B Testing – checkout friction
M1	Build browse abandonment flow in Klaviyo (currently missing)	Email	\$1.95 RPR per recipient	Email Lifecycle – browse abandon.
M1	Google: branded exact match + Shopping campaign + negative KW audit	Google Ads	CPA reduction	Paid Search – QS, max CPC, match types
M1	Build "From Costco to Capsule" SEO landing page	SEO + Site	Branded organic traffic	SEO – branded/non-branded keyword strategy
M2	Launch TikTok account – 3 videos/week: outfit transitions, GRWM, honest review	TikTok Organic	500 followers, reach	Social Media + 6 STEPPS (Triggers + Public)

M2	Add "Complete the Set" cross-sell module to leggings + sports bras PDPs	Site (Shopify)	AOV \$175 → \$200+	A/B Testing – AOV uplift experiment
M2	Build post-purchase nurture flow (cross-sell Day 2, Maven intro Day 7, review Day 14)	Email (Klaviyo)	RPR 20% → 28%	Email Lifecycle – post-purchase nurture
M2	Launch Pinterest: create 5 pin series, schedule via Tailwind (\$19/mo)	Pinterest Organic	Impressions + clicks	SEO (owned media) + Inbound Marketing
M2	SEO: update title tags + meta descriptions on all top PDPs + add schema markup	Organic Search	CTR up + rich results	SEO – on-page, HTML/schema from class
M3	Outreach to 8-10 Canadian micro-influencers via Awin affiliate codes	Affiliate + TikTok	Trackable affiliate revenue	Social Media – micro-influencer economics
M3	Launch Maven Studio "Spring Drop" model with 48-hr waitlist capture	Email + TikTok	Waitlist growth	Viral Marketing – Scarcity + Triggers (6 STEPPS)
M3	Launch SMS opt-in (Klaviyo); use for Maven drops + cart abandon recovery	SMS (Klaviyo)	SMS opt-in rate	Email Lifecycle – SMS extension, CASL compliance
M4	Launch Capsule Club loyalty program (Smile.io – Starter + Collective + Founder)	Retention (Smile.io)	RPR 28% → 35%+	Email Lifecycle – Lifecycle Pyramid (class)
M4	TikTok Spark Ads: boost top-performing organic content only	TikTok Paid	CPV <\$0.10	Paid Social – bidding models, CPV buying
M4-6	SEO content: 4 blog posts targeting non-branded + Costco bridge terms	Organic Search	Keyword rankings	SEO – long-tail keyword strategy
M6-12	Expand Pinterest to 25+ pins/month; apply Pinterest Ads to top-performing pins	Pinterest Paid	Paid traffic diversification	Display Media – programmatic + native ads

First 90 Days

Weekly Action Plan

Week 1–2: Diagnose Everything, Change Nothing Yet

- Install Microsoft Clarity. Record 20 sessions on the leggings PDP and checkout. Do not act until you know where people actually leave.
- Subscribe to your own email welcome flow as a new customer. Screenshot every email. Note: where is the discount? Where is the brand story? When would you personally have closed the tab?
- Google: "Tuff Athletics online," "Tuff leggings DTC," "buy Tuff activewear Canada." Screenshot results. This is your Costco bridge keyword baseline.
- Search "women's activewear Canada" on Pinterest. Note: who is pinning? What content performs? Tuff is not there. That is a whitespace document.
- Pull GA4 Traffic Acquisition report. Confirm which email flows are generating revenue. Confirm UTM tags are tracking email traffic correctly

Week 3–4: Fix the Three Biggest Leaks

- Add Okendo or Judge.me to Shopify (30 mins). Email 30 most recent buyers with a 10% next-order incentive for a review.
- In Klaviyo: duplicate the welcome flow. Move the discount code from Email 1 to Email 2. Set Email 1 to send brand story + top 3 bestsellers.
- Add Monster Cart Upsell app to Shopify (20 mins). Set free-shipping progress bar threshold to \$80. Test: does AOV move toward \$200?
- Enable Apple Pay and Shop Pay in Shopify checkout settings (5 mins).
- Brief the creative team on the first 3 TikTok videos. Shot list: (1) GRWM school run in Maven Studio, (2) "Gym to coffee in Tuff leggings — am I getting stared at?", (3) "I spent \$75 on Tuff vs \$150 on Lululemon — here is what I found."

Month 2–3: Build the Systems That Compound

- Go live on TikTok. Post 3 videos in week one. Consistency matters more than perfection
- Build browse abandonment flow in Klaviyo. Set trigger: Viewed Product → no Added to Cart within 4 hours. Email 1: product image + 1 review quote. Email 2 (24 hrs): "Others are looking at"
- Add the "Complete the Set" module to leggings PDPs using Shopify's native product recommendations or the Frequently Bought Together app.
- Create the "From Costco to Capsule" SEO landing page. 400 words, internal links to the top 3 bestselling leggings, a size guide, and a clear CTA.
- Set up 5 Pinterest boards. Pin 3× per week using Canva templates. Track monthly impressions in Pinterest Analytics.
- Build the Maven Studio Spring Drop waitlist page. Start teasing on TikTok 4 weeks before launch.

Summary

Tuff Collection has all three things a DTC brand needs to win: a product that outperforms its price point, a genuinely compelling origin story, and an engaged audience that already shows up. The growth is not locked behind more budget – it is locked behind better execution on channels and systems the brand already has access to.

The order of operations matters more than any individual tactic

- Add Okendo or Judge.me to Shopify (30 mins). Email 30 most recent buyers with a 10% next-order incentive for a review.
- In Klaviyo: duplicate the welcome flow. Move the discount code from Email 1 to Email 2. Set Email 1 to send brand story + top 3 bestsellers
- Add Monster Cart Upsell app to Shopify (20 mins). Set free-shipping progress bar threshold to \$80. Test: does AOV move toward \$200?
- Enable Apple Pay and Shop Pay in Shopify checkout settings (5 mins)
- Brief the creative team on the first 3 TikTok videos. Shot list: (1) GRWM school run in Maven Studio, (2) "Gym to coffee in Tuff leggings — am I getting stared at?", (3) "I spent \$75 on Tuff vs \$150 on Lululemon — here is what I found."
